

EBS Market Rates Feed Handler

Gain the market edge by accessing EBS market rates in real time every time.

Gaining access to currency market rates as they happen is essential to being ahead of the market and maintaining a competitive advantage. To this end EBS offers a real time currency market feed direct to the banks; assuring the fastest possible delivery of data to their doorstep. There is however, the challenge of getting the data immediately to the desks of the people that need it.

EBS MRF Handler will deliver both the EBS Live and Benchmark feed data with practically no delay, safely and consistently. You can now rely on gaining the edge every time.

The need for speed and reliability

The EBS MRF Handler receives the EBS Markets Rates Feed directly from EBS via an IP connection. Gissing's unique ultra-fast data handler technology parses and maps the data for storage within the EBS MRF

Cache ready for immediate use. The cache interfaces to your systems as either an RMDS Source or a TIB/ Rendezvous Publisher depending on your market data platform. Employing Publish and Subscribe technology, client applications can take the data they require the instant they need it. All this is achieved with virtually no system latency.

We realise that the quality of the EBS Market Rates Feed data is of paramount importance when used in mission critical applications in Trading, Analysis , Risk Management and Administration. To this end we have included several safety features; for instance, should there be an EBS feed interruption the cache is purged, assuring no possibility of stale data used in the firm's mission critical operations and decision support systems. Additionally, speed and reliability is assured as a result of well-evolved and time-proven Gissing handler architecture.

Complete status monitoring and control

The EBS MRF Handler includes an administration tool to monitor system performance and check on system links to the EBS data source. For ease and convenience of access, the administration tool console is viewable via a standard web browser.

Founded as Gissing Consulting in 1991, Gissing is now the leading supplier of multi-vendor contribution systems to financial institutions worldwide. We have more than 30 major investment banks and brokers as clients and offices in London, New York and Hong Kong. Gissing was acquired by Reuters in January 2008 and now operates as a division of Thomson Reuters.
